SPDK, PMDK & Intel[®] VTune[™] Profiler Virtual Forum

THE BIG PICTURE

- What is VTune Profiler?
- Really? You can do that?
- I have heard about oneAPI, how does that relate to VTune Profiler?
- I have heard about Parallel Studio, how does that relate to VTune Profiler?
- What are examples of uses of VTune Profiler that could transform the way we work?

PROGRAMMING CHALLENGES FOR MULTIPLE ARCHITECTURES

Growth in specialized workloads

Diverse set of data-centric hardware required

No common programming language or APIs

Inconsistent tool support across platforms

Each platform requires unique software investment

Refer to <u>software.intel.com/articles/optimization-notice</u> for more information regarding performance & optimization choices in Intel software products. Copyright ©, Intel Corporation. All rights reserved. *Other names and brands may be claimed as the property of others.

INTRODUCING ONEAPI

Unified programming model to simplify development across diverse architectures

Unified and simplified language and libraries for expressing parallelism

Uncompromised native high-level language performance

Based on industry standards and open specifications

Interoperable with existing HPC programming models

Refer to <u>software.intel.com/articles/optimization-notice</u> for more information regarding performance & optimization choices in Intel software products. Copyright ©, Intel Corporation. All rights reserved. *Other names and brands may be claimed as the property of others.

VES, YOU STILL GET INTEL® VTUNETM PROFILER ONEAP

Analysis Tools:

- Intel[®] VTune[™] Profiler
- Intel[®] Advisor

Intel[®] Inspector
 Your favorite tools
 extended to accelerators

Beta Available Now

Visit software.intel.com/oneapi for more details

Some capabilities may differ per architecture and custom-tuning will still be required. Other accelerators to be supported in the future. Refer to <u>software.intel.com/articles/optimization-notice</u> for more information regarding performance & optimization choices in Intel software products. Copyright ©, Intel Corporation. All rights reserved.

*Other names and brands may be claimed as the property of others.

PERFORMANCE

Deep Dive

SPDK, PMDK & Intel[®] VTune[™] Profiler Virtual Forum

"If all you have is a Hammer, everything looks like a Nail ..."

SPDK, PMDK & Intel[®] VTune[™] Profiler Virtual Forum

"The best kept secret"

KEY TAKEAWAY

Intel offers developers an extensive Tool Box ... world class tools that will help developers achieve the best performance

PERFORMANCE IS MANY THINGS

- Efficiency/speed of executing instruction stream in CPU cores
- Doing more per instruction (aka vector ops, loads, stores)
- Minimize wasted cycles due to waiting for cache and memory access
- Minimize wasted cycles due to IO for data from storage and network
- Utilize all the CPU cores with thread and process parallelism

DEVELOPER ROLES

- Programmer: develops algorithms and implements in high level programming languages such as C, C++, Fortran, Open CL, Data Parallel C++
- Software Architect: architects large software applications and frameworks; specifies external behavior and functionality, and internal modularity and interfaces
- Performance Engineer: deep understanding of application performance characteristics, domain expertise in software and HW bottlenecks and dependence on HW for delivering performance goals

DESIGN IT, TUNE, DEBUG, THEN IMPLEMENT

INTEL® ADVISOR THREAD PROTOTYPING—DESIGN WITH DISRUPTING DEVELOPMENT

Have You

- Threaded an app, but seen little benefit?
- Hit a "scalability barrier?"
- Delayed release due to synchronization errors?

Data Driven Threading Design

- Quickly prototype multiple options
- Project scaling on larger systems
- Find synchronization errors before implementing threading
- Design without disrupting development

Add Parallelism with Less Effort, Less Risk & More Impact

"Intel[®] Advisor allowed us to quickly prototype ideas for parallelism, saving developer time & effort"

Simon Hammond Senior Technical Staff **Sandia National Laboratories**

MODERNIZE YOUR CODE WITH INTEL® ADVISOR

OPTIMIZE VECTORIZATION, PROTOTYPE THREADING, CREATE AND ANALYZE FLOW GRAPHS

The Difference is Growing with Each New Hardware Generation

Modern Performant Code

- Vectorized (uses Intel[®] AVX-512/AVX2)
- Efficient memory access
- Threaded

Intel[®] Advisor

- Adds & optimizes vectorization
- Analyzes memory patterns
- Quickly prototypes threading

New

- Enhanced hierarchical roofline analysis
- Shareable HTML roofline
- Flow graph analysis
- Offload advisor

Benchmark: Binomial Options Pricing Model https://software.intel.com/en-us/articles/binomial-options-pricing-model-code-for-intel-xeon-phi-coprocessor

Benchmark results were obtained prior to implementation of recent software patches and firmware updates intended to address exploits referred to as "Spectre" and "Meltdown". Implementation of these updates may make these results inapplicable to your device or system. For more complete information about performance and benchmark results, visit <u>www.intel.com/benchmarks</u> See Vectorize & Thread or Performance Dies Configurations for 2010-2017 Benchmarks in Backup. Benchmark source: Intel Corporation.

SPDK, PMDK & Intel[®] VTune[™] Profiler Virtual Forum

Intel's compilers may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include SSE2, SSE3, & SSSE3 instruction sets & other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel. Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors. Certain optimizations not specific to Intel microarchitecture are reserved for Intel microprocessors. Please refer to the applicable product User and Reference Guides for more information regarding the specific instruction sets covered by this notice. Notice Revision #20110804

FASTER CODE FASTER USING INTEL® ADVISOR

Vectorization

"Intel[®] Advisor's Vectorization Advisor permitted me to focus my work where it really mattered. When you have only a limited amount of time to spend on optimization, it is invaluable."

Gilles Civario Senior Software Architect Irish Centre for High-End Computing

"Intel[®] Advisor's Vectorization Advisor fills a gap in code performance analysis. It can guide the informed user to better exploit the vector capabilities of modern processors and coprocessors."

> Dr. Luigi Iapichino Scientific Computing Expert **Leibniz Supercomputing Centre**

Threading

"Intel® Advisor has been extremely helpful in identifying the best pieces of code for parallelization. We can save several days of manual work by targeting the right loops and we can use Advisor to find potential thread safety issues to help avoid problems later on."

> Carlos Boneti HPC software engineer, **Schlumberger**

"Intel® Advisor has allowed us to quickly prototype ideas for parallelism, saving developer time and effort, and has already been used to highlight subtle parallel correctness issues in complex multi-file, multi-function algorithms."

Simon Hammond
Senior Technical Staff
Sandia National Laboratories

More Reviews

"AUTOMATIC" VECTORIZATION OFTEN NOT ENOUGH

A GOOD COMPILER CAN STILL BENEFIT GREATLY FROM VECTORIZATION OPTIMIZATION

Compiler will not always vectorize

- Check for Loop Carried Dependencies using Intel[®] Advisor
- All clear? Force vectorization.
 C++ use: pragma simd, Fortran use: SIMD directive

Not all vectorization is efficient vectorization

- Stride of 1 is more cache efficient than stride of 2 and greater. Analyze with Intel[®] Advisor.
- Consider data layout changes
 <u>Intel[®] SIMD Data Layout Templates</u> can help

Benchmarks on prior slides did not all "auto vectorize." Compiler directives were used to force vectorization and get more performance.

Arrays of structures are great for intuitively organizing data, but are much less efficient than structures of arrays. Use the Intel[®] SIMD Data Layout Templates (Intel[®] SDLT) to map data into a more efficient layout for vectorization.

GET BREAKTHROUGH VECTORIZATION PERFORMANCE

INTEL[®] ADVISOR—VECTORIZATION ADVISOR

Faster Vectorization Optimization

- Vectorize where it will pay off most
- Quickly ID what is blocking vectorization
- Tips for effective vectorization
- Safely force compiler vectorization
- Optimize memory stride

Data & Guidance You Need

- Compiler diagnostics +
 Performance Data + SIMD efficiency
- Detect problems & recommend fixes
- Loop-Carried Dependency Analysis
- Memory Access Patterns Analysis

FIND EFFECTIVE OPTIMIZATION STRATEGIES

INTEL® ADVISOR—CACHE-AWARE ROOFLINE ANALYSIS

Roofline Performance Insights

- Highlights poor performing loops
- Shows performance 'headroom' for each loop
 - Which can be improved
 - Which are worth improving
- Shows likely causes of bottlenecks
- Suggests next optimization steps

Nicolas Alferez, Software Architect Onera – The French Aerospace Lab

"I am enthusiastic about the new "integrated roofline" in Intel[®] Advisor. It is now possible to proceed with a step-bystep approach with the difficult question of memory transfers optimization & vectorization which is of major importance."

EFFICIENTLY OFFLOAD TO GPU INTEL® ADVISOR^(BETA)— OFFLOAD ADVISOR

- Identify high-impact opportunities to offload
 - And areas that are not advantageous to offload
- Model performance, headroom and bottlenecks to get your code ready even before you have the GPU
- Pinpoint performance bottlenecks and key bounding factors
 - e.g. memory, cache, compute and data transfer
- No special recompile required

FIND EFFECTIVE OPTIMIZATION STRATEGIES INTEL® ADVISOR (BETA)- GPU ROOFLINE

- See performance headroom against hardware limitations
- Determine optimization strategy
 - Identify which optimizations will payoff the most
 - Detect bottlenecks and their likely causes (memory bound vs. compute bound)
- Visualize optimization progress

PROFILING WORKFLOW

APPLICATION PERFORMANCE SNAPSHOT

DISCOVER OPPORTUNITIES FOR BETTER PERFORMANCE WITH VECTORIZATION & THREADING

Objectives

- Simple enough to run during a coffee break
- Highlight where code modernization can help

Users

- Performance teams fast prioritization of which apps will benefit most
- All Developers size the potential performance gain from code modernization

Non-Objectives

Actionable tuning data – that is another tool.
 Snapshot is just a fast "health" check.

Free download: <u>http://www.intel.com/performance-snapshot</u> Also included with Intel[®] Parallel Studio and Intel[®] VTune[™] Profiler products.

INTEL[®] VTUNE PROFILER

Single Thread

Optimize single-threaded performance.

Multithreaded

Effectively use all available cores. Se

System

See a system-level view of application performance.

Media & OpenCL™ Applications

Deliver high-performance image and video processing pipelines.

HPC & Cloud

Access specialized, in-depth analyses for HPC and cloud computing.

Memory & Storage Management

Diagnose memory, storage, and data plane bottlenecks.

Analyze & Filter Data Mine data for answers.

Environment

Fits your environment and workflow.

INTEL® VTUNE™ PROFILER MEMORY ANALYSIS WILL BIGGER MEMORY HELP WITHOUT CODE CHANGES?

- Use memory in Memory Mode. Look for applications with:
 - A memory footprint larger than DRAM
 - A hot working set size smaller than DRAM

Memory Consumption Analysis

Memory Access + Dynamic Memory Object Analysis

CONFIGURATION WORKFLOW

Correctness Tools Increase ROI by 12%-21%¹

- Errors found earlier are less expensive to fix
- Races & deadlocks not easily reproduced
- Memory errors are hard to find without a tool

Debugger Integration Speeds Diagnosis

- Breakpoint set just before the problem
- Examine variables and threads with the debugger

What's New

ind Persistent Memory Errors

- Missing / redundant cache flushes
- Missing store fences
- Out-of-order persistent memory stores
- PMDK transaction redo logging errors

¹Cost Factors – Square Project Analysis - CERT: U.S. Computer Emergency Readiness Team, and Carnegie Mellon CyLab NIST: National Institute of Standards & Technology: Square Project Results
